

Robert Barlow received his undergraduate degree in Chemistry from Amherst College (BA 1977) and graduate degrees in Mechanical Engineering from Stanford University (MS 1980, PhD 1985). He worked on energy technologies at the Solar Energy Research Institute (1980-1982) and at Sandia National Laboratories in Albuquerque, NM (1985-1987), before moving to the Combustion Research Facility at Sandia National Laboratories, Livermore in 1987. Dr. Barlow is the principal investigator in the Turbulent Combustion Laboratory. His main research interests are in fundamental aspects of turbulent combustion and in the development of experimental data sets for validating turbulent combustion models. He specializes in laser-based multiscale experiments in turbulent flames and has published over 60 journal articles in this field. Dr. Barlow collaborates with several international research groups working on experimental validation of turbulent combustion models. He is the primary organizer of the International Workshop on Measurement and Computation of Turbulent Nonpremixed Flames (TNF), which conducts collaborative comparisons of measured and modeled results on turbulent flames. He serves on the Editorial Boards of *Combustion Theory and Modeling* and the *Proceedings of the Combustion Institute*.
