

William H. Green is Associate Professor of Chemical Engineering. He graduated *summa cum laude* from Swarthmore College in 1983, and received his Ph.D. in Physical Chemistry from the University of California, Berkeley in 1988. After postdoctoral work at Cambridge University, he worked briefly at the University of Pennsylvania, before taking a position at Exxon's Corporate Research Laboratory as a Principal Investigator in 1991. In 1997 he joined the MIT faculty, where he leads a group of 12 researchers developing advanced simulation methods for fuel-related chemistry. He has organized the sessions on Combustion Reaction Engineering for the American Institute of Chemical Engineering's Annual Meeting for many years, and he was recently elected to the Board of the Eastern States Section of The Combustion Institute. Since 2003 he has been an Associate Editor of the *International Journal of Chemical Kinetics*. Prof. Green has received many awards, including the NSF CAREER award in 1999, the Thiele Lectureship Award from the University of Notre Dame in 2004, the Certificate of Merit from the ACS Division of Environmental Chemistry in 2005, and the American Chemical Society Division of Fuel Chemistry's Richard A. Glenn Award in 2004.
